

MEMBER & MEMBERSHIP MANAGEMENT MODULE

(Core Module of Community Management Software)

- ✓ One person
- ✓ Multiple communities
- ✓ Different roles per community
- ✓ Seamless app & portal experience
- ✓ Zero confusion for users

1. CORE DESIGN PHILOSOPHY (VERY IMPORTANT)

1.1 One Person → One Master Identity

- Each **human** = **ONE Master Member Profile**
- CNIC / Passport / Email / Mobile used for **identity deduplication**
- This profile lives **globally** in the platform

1.2 Membership is Community-Specific

- Membership is **NOT the same** as a person
- A person can:
 - Belong to **many communities**
 - Hold **different roles in each**
 - Have **different permissions per community**

Think of it like:

LinkedIn Profile (Person) + Multiple Companies (Communities) + Different Job Roles

2. MASTER MEMBER PROFILE (GLOBAL)

Purpose

Create a **single identity** usable across all communities.

Key Attributes

- Full Name
- CNIC / Passport (optional but recommended)
- Email (unique)
- Mobile Number (unique)
- Profile Photo
- Gender (optional)
- Date of Birth (optional)
- Address (optional)
- Emergency Contact
- Language Preference
- Notification Preferences
- Login Credentials
- KYC Status (optional / community-specific)

Rules

- Created **once**
- Reused across all communities
- User never creates duplicate profiles

3. COMMUNITY MEMBERSHIP OBJECT (CORE CONCEPT)

Each membership links:

[Member] ↔ [Community] ↔ [Role(s)]

Membership Attributes

- Community ID
 - Member ID
 - Membership Type
 - Membership Status
 - Role(s)
 - Start Date
 - End Date (optional)
 - Approval Status
 - Access Scope
 - Community-Specific Data
-

4. MEMBERSHIP TYPES (CONFIGURABLE)

Each community can define its own types, e.g.:

Residential

- Owner
- Tenant
- Family Member
- Staff

Commercial / Mall

- Shop Owner
- Shop Manager
- Vendor
- Customer (limited)

Associations / Chambers

- Individual Member
- Corporate Member
- Associate Member
- Honorary Member

NGOs / Clubs

- Volunteer
- Donor
- Board Member
- Beneficiary

Companies

- Client
 - Customer
 - AMC Customer
 - Support Subscriber
-

5. ROLE & PERMISSION SYSTEM (PER COMMUNITY)

Role-Based Access Control (RBAC)

A member may have:

- Role A in Community X
- Role B in Community Y
- No admin power in Community Z

Example

Community	Role	Powers
Residence	Resident	Raise complaints
Chamber	Committee Member	Approve budgets
NGO	Volunteer	View tasks
Company	Client	Raise support tickets

Permissions Control

- Feature-level access
 - Action-level permissions
 - Data visibility scope
-

6. MEMBERSHIP CREATION FLOWS

6.1 Self Signup → Create New Community

- User signs up
 - Creates a new community
 - Automatically becomes **Super Admin**
 - Can define:
 - Community type
 - Membership types
 - Approval rules
-

6.2 Join Existing Community (Member-Initiated)

Steps:

1. Search / Discover community
 2. Apply for membership
 3. Select membership type
 4. Upload required info (community-specific)
 5. Await approval
 6. Membership activated
-

6.3 Invite-Based Membership (Admin-Initiated)

Steps:

1. Admin invites via email / phone
 2. Invitee accepts
 3. If profile exists → link
 4. If not → create profile
 5. Assign role + membership type
-

7. MULTI-COMMUNITY NAVIGATION (VERY IMPORTANT UX)

Community Switcher (Top-Level UI)

- Always visible dropdown / switcher
- Shows:
 - Community name
 - Community type icon
 - Role badge

Example UI

🏠 My Residence (Resident)
🏢 Trade Chamber (Committee)
🏊 Gym Club (Member)

Switching community:

- Instantly changes:
 - Menu
 - Permissions
 - Data
 - Notifications

8. MEMBER DASHBOARD (PERSON-CENTRIC)

Global Member Dashboard Shows:

- All communities joined
- Role in each community
- Pending approvals
- Tasks / alerts per community
- Notifications (grouped by community)

9. COMMUNITY MEMBER DIRECTORY (ADMIN VIEW)

Features

- Member list with filters
 - Role-wise views
 - Status tracking
 - Bulk actions
 - Export members
 - Membership history
-

10. MEMBER PROFILE (CONTEXT-AWARE VIEW)

Same person, different view per community

Example:

- In Residence → flat info visible
- In Chamber → company info visible
- In NGO → volunteer hours visible

This avoids:

✗ confusion

✗ data overload

11. MEMBERSHIP STATUS MANAGEMENT

Statuses:

- Pending
 - Active
 - Suspended
 - Expired
 - Terminated
 - Blacklisted (community-only)
-

12. MEMBERSHIP LIFECYCLE & HISTORY

Track:

- Join date
- Role changes
- Approval logs
- Suspension history
- Exit reason

Audit-ready.

13. FAMILY / SUB-PROFILES (OPTIONAL EXTENSION)

For residential & similar:

- Family members linked to primary member
 - Limited access profiles
 - Role inheritance rules
-

14. DATA ISOLATION & PRIVACY

Critical rules:

- Communities cannot see each other's data
 - Admins only see members **inside their community**
 - Global admin only sees master profiles
-

15. TECHNICAL MODEL (SIMPLIFIED)

Core Tables

- Users (Master)
 - Communities
 - Memberships
 - Roles
 - Permissions
 - Membership_Roles
 - Membership_Metadata
-

16. WHY THIS MODULE WORKS

- ✓ Scales to **any community type**
- ✓ Supports **multi-membership without confusion**
- ✓ Enterprise + consumer friendly
- ✓ Ready for mobile & web
- ✓ Future-proof for monetization
